

Solid Shapes

We see a lot of objects around us with different shapes.

Let us learn about these solid shapes.

Properties of solids :

- (a) Each side of these solid shapes is a surface and is called a face which can be flat or curved.
- (b) Two faces always meet at an edge which can be straight or curved.
- (c) Three edges meet at a point called vertex.

1. Cuboid

Look at the objects given below :

match-box

cupboard

gift

blackboard duster

Each of these objects has the shape of a cuboid.

Each face of the cuboid is a rectangle.

Remember : A cuboid has 6 faces,
12 edges and 8 vertices.

Teacher Tip:

The students should be asked to count the faces, edges and vertices using cuboidal shaped objects such as a pencil box or book.

2. Cube

Look at the objects given below :

dice

building block

sugar cube

Rubik's cube

Each of these objects is a cube.

Each face of the cube is a square.

Remember : A cube has **6** faces, **12** edges and **8** vertices.

3. Sphere

Look at the following objects carefully :

Tennis ball

Foot-ball

Globe

Each of these objects is a sphere.
A sphere has only one curved surface.

Remember : A sphere has **1** curved face, **0** edges and **0** vertices.

4. Cylinder

Some objects are shown below:

coke can

candle

tubelight

straw

Each of these objects is a cylinder.

Remember : A cylinder has **1** curved face, **2** flat faces, **2** curved edges and **0** vertices.

5. Cone

birthday cap

ice-cream cone

funnel

These objects are conical in shape.

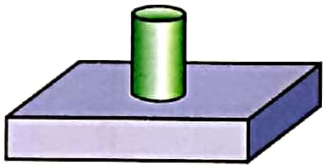

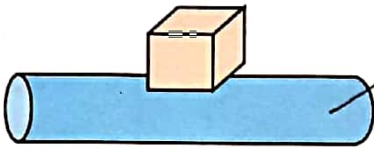

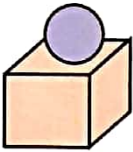

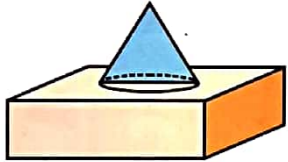

Remember : A cone has **1** curved face, **1** flat face, **1** curved edge and **1** vertex.

Activity-3

1. Match the following:

	cylinder and cube
	cuboid and cone
	cuboid and cylinder
	cube and sphere

2. Circle the correct shape of the following objects:

cylinder

sphere

cuboid

cube

cylinder

cone

cube

sphere

cone

cuboid

cone

cube

cylinder

sphere

cone

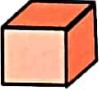

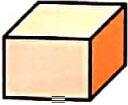

cone

cuboid

sphere

3. Complete the table:

Shape	Faces	Edges	Vertices
sphere 	1	0	0
cube 	6	12	8
cylinder 	3	2	0
cone 	2	1	1
cuboid 	6	12	8

Fun Time

Try to draw the figure given below without lifting the pencil:

Number of straight lines

Number of curved lines

Objects that Roll and Slide

We have already learnt that solid shapes have curved and flat faces.

1. Solid shapes with flat faces slide on a slope.

Examples : cuboid and cube.

2. Solid shapes with curved faces roll on a slope.

Example : sphere.

3. Solid shapes with both flat and curved faces roll or slide depending on the face.

Examples : cone and cylinder.

A cylinder will roll on a face.

A cone will slide on a face.

Activity-4

Who am I?

I have one flat face and one curved face. My flat face is circular in shape. I look like a party hat!

I am a *Cone*

I have two flat faces and one curved face. My flat faces are circular. I don't have vertices.

I am a *Cylinder*

I have 6 flat faces, 12 edges and 8 vertices. All my edges are of the same length.

I am a *Cube*

I am perfectly round. I don't have flat face and I don't have straight edges.

I am a *Sphere*

Mental Maths Corner

1. Tick (✓) the correct answer :

(a) A cuboid has 12 edges.

(i) 8

(ii) 12

(iii) 6

(b) A sphere has 1 curved face

(i) 1

(ii) 2

(iii) 0

(c) The name of the shape given in the adjoining figure is

(i) Square

(ii) Circle

(iii) Cuboid

2. An example of a cone is ... ice-cream cone ...

3. The number of vertices in a rectangle is 4

4. A cylinder has 3 faces.

Review Exercise

1. Complete the statement :

(a) A cube has 6 faces.

All the faces of a cube are Squares

(b) A cuboid also has 6 faces.

The faces of a cuboid are Rectangles

2. Look at the pictures and choose the correct answer :

(a)

The sphere will
roll/slide ✓

(b)

The cube will
roll/slide ✓

(c)

The cylinder will
roll/slide ✓
